

TEAMTHRU | CAPABILITY STATEMENT

TeamThru is a Minority-Owned, Veteran-Owned small business delivering hands-on application modernization, custom development, and infrastructure engineering across on-premises, hybrid, and cloud environments. We specialize in modernizing legacy systems, building secure applications, and designing resilient infrastructure aligned to mission and compliance needs.

Application Modernization & Development

- Legacy application assessments and modernization roadmaps
- .NET application modernization and refactoring
- Custom application development (web, APIs, backend services)
- Monolith to modular and microservices architectures
- Application re-hosting, re-platforming, and re-engineering
- API development and system-to-system integration
- CI/CD pipeline design and modernization

Infrastructure & Cloud Engineering

- On-premises infrastructure design and optimization
- Hybrid cloud architecture (on-prem + cloud)
- Microsoft Azure and AWS cloud engineering
- Virtual machines, networking, and storage design
- Infrastructure as Code (ARM, Bicep, Terraform)
- High availability, disaster recovery, and backup strategies

DevSecOps & Operations

- DevSecOps pipeline implementation
- Secure configuration and hardening
- Identity and access management
- Monitoring, logging, and operational readiness
- Application and infrastructure sustainment (O&M)

Microsoft 365 & Automation Solutions

- Microsoft 365 architecture and implementation
- SharePoint Online and hybrid SharePoint solutions
- Power Automate workflow automation
- Business process digitization and approvals
- M365 governance, security, and adoption support

Security & Compliance Alignment

- NIST 800-53 / RMF alignment
- FedRAMP-aware architecture and controls support
- Secure hybrid and cloud environment design
- Risk-based technical decision support

Core Technologies

- Microsoft .NET
- Azure
- AWS
- Microsoft 365
- SharePoint
- Power Automate
- SQL Server
- REST APIs
- Windows & Linux
- On-Prem Infrastructure
- Hybrid Cloud
